

MAY 24-26, 2016

Ubiquitous Energy to demonstrate transparent solar cell prototypes at 2016 SID Display Week.

This week Ubiquitous Energy will again demonstrate its truly transparent solar technology – ClearView Power™ – at SID's Display Week. This time instead of entertaining crowds on the showroom floor, they've opted to host potential customers and partners in a private suite. "While it was awesome to see people lined up four and five deep at our booth last year, this year is all about making deeper connections with those who can put ClearView Power™ to work," said Ubiquitous Energy CEO Miles Barr.

Since earning the Innovation Award at Display Week 2015, Ubiquitous Energy has been able to increase the power conversion efficiency of its transparent solar cells above the threshold the company set to begin engaging customers. "Of course it's an honor to receive awards, but we're focused on getting ClearView Power™ into products as an invisible onboard power source," said Barr.

If you are interested in meeting with the Ubiquitous Energy team at Display Week, please contact customer@ubiquitous.energy.
